there have been numerous books published that have dealt with psychological assessment these books have ranged from the theoretical to the clinical however most of the pragmatics involved in the day to day activities of the psychological assessor often have been neglected in the press in light of the above the primary objective of psychological assessment in clinical practice is to provide the reader students and practitioners alike with the realities of conducting psychological assessment in clinical settings where there is not the availability of a plethora of research assistants and staff indeed most individuals end up being solo practitioners or at best work in settings where they must conduct assessment themselves this multi authored book then details the specifics as to how this is done

providing vital updates this two volume set describes the central role and aim of health care needs assessment in the nhs health care reforms and explains the epidemiological approach to needs assessment and the effectiveness and availability of services

a natural progression from the authors widely known work on assessment and programming in early intervention link is a revolutionary process that hurdles traditional obstacles to selecting and using authentic assessment intervention evaluation procedures for young children pulling the best properties from well known assessment and curriculum models link identifies critical markers for judging quality and effectiveness authenticity collaboration convergence equity sensitivity and congruence the authors apply this unique six standard index to more than 50 different curriculum embedded and curriculum compatible assessment and intervention systems rating and analyzing each in addition they explain how early childhood professionals can perform their own quality reviews and then customize the system s of their choice to specific populations or programs with this essential resource in hand early intervention team members and administrators can ensure the individualized support opportunities every child needs for healthy development

provides a tool for assessment of a young child s developmental level in a broad range of categories especially useful with handicapped children

this book presents an amalgam of early intervention ideas from the fields of education occupational therapy and physical therapy for children with developmental delays an introductory chapter describes the approach s three theoretical bases neurodevelopmental treatment ndt sensory integration and piagetian theory chapter 1 considers assessment

including determination of eligibility screening diagnosis evaluation for program planning and program evaluation and program components are reviewed in chapter 2 including positioning handling and facilitating movement chapter 3 considers sensory integration program components including tactile vestibular and proprioceptive activities piagetian program components such as play and cognitive content are described in the fourth chapter covering object permanence means ends and cause effect gestural and vocal imitation and spatial relationships chapter 5 presents speech language program components including feeding speech production auditory responsiveness communication and augmentative communication chapter 6 offers guidelines for integrating program components with sections on the team model team members services delivered by the transdisciplinary team in service programs incorporating therapy in the classroom and development of individualized programs four appendixes list assessment and instructional resources a glossary and a bibliography of 120 items are also included db

mcloughlin and lewis provide extensive information on the use of testing computers and other assessment tools guidelines in the monitoring of test results are presented as well as methods of increasing parent participation in the assessment process

comprehensive authoritative and up to date psychological assessment of children second edition offers step by step guidance on the most effective approaches to the psychological and educational assessment of children written by leading authorities this resource covers all the major assessment tools including the wisc iii the woodcock johnson revised bender gestalt halstead reitan and luria nebraska it provides invaluable information on conducting clinical interviews and performing informal assessment this second edition includes new material on curriculum based assessment and on the assessment of perceptual motor skills social skills autistic disorders and mental retardation

structural behavior of reinforced concrete elements strongly depends on the interaction between the reinforcing bars and the surrounding concrete which is generally referred as bond in concrete in service conditions the reinforcement to concrete bond governs deformability through the tension stiffening of concrete surrounding the bar as well the crack development and crack width at ultimate limit state bond governs anchorage and lap splices behavior as well as structural ductility when plain smooth bars were used the steel to concrete bond was mainly associated with chemical adhesion friction that is related to the surface roughness of the rebar as steel strengths increased the need to enhance interaction between steel and the surrounding concrete was recognized and square twisted rebars indented rebars or later on ribbed rebars came into the market the latter being the type of deformed bar most commonly adopted since the 1960 70s when ribbed rebars became widely used several research studies started worldwide for better understanding the interaction between ribs and the surrounding concrete researchers evidenced the development of micro cracks due to the wedge action of the ribs towards the external face

of the structural element if confinement is provided by the concrete cover by transverse reinforcement or by an external transverse pressure the full anchorage capacity is guaranteed and a pull out failure occurs with crushing of concrete between the ribs on the contrary with lesser confining action a splitting failure of bond occurs the latter may provoke a brittle failure of the lap splice or in some cases of anchorages however after many years of research studies on bond related topics there are still several open issues in fact new materials entered into the market as concrete with recycled aggregates or fibre reinforced concrete the latter having a kind of distributed reinforcement into the matrix the fibres provides a better confinement to the wedge action of the ribs in addition concrete and steel strength continuously increased over the years causing changes in the bond behavior due to differences in mechanical properties of materials but also to the different concrete composition at the interface with the steel rebar causing a different bond behavior moreover the lower water cement ratio of these high strength concrete makes the bleeding phenomena less evident changing the concrete porosity in the upper layers of the structural element and thus making the current casting position parameters no longer reliable finally concrete with recycled aggregates are becoming more important in a market that is looking forward to a circular economy as such all the experimental results and database that allowed the calibration of bond rules now present in building codes for conventional concrete may be not be representative of these new types of materials nowadays adopted in practice furthermore after more than 50 years of service life structural elements may not satisfy the current safety requirements for several reasons including material degradation with particular reference to steel corrosion or increased loads by also considering the seismic actions that were non considered by building codes at the time of the original design the structural assessment of existing structures requires proper conceptual models and new approaches for evaluating the reliability of existing structures by also considering the remaining expected service life in addition specific rules for older materials as plain smooth bars should be revised for a better assessment of old structures last but not least interventions in existing structures may require new technologies now available such as post installed rebars while many advances have been achieved there remain areas where a better understanding of bond and its mechanisms are required and where further work is required to incorporate this understanding into safe and economic rules to guide construction and maintenance of existing infrastructures these aspects were widely discussed within the technical community particularly in the fib task group 2.5 and in the aci 408 committee dealing with bond and anchorage issues furthermore special opportunities for discussing bond developments were represented by the international conferences on bond in concrete held each decade since 1982 as well as by joint workshops organized by fib tg2.5 and aci 408 within this technical collaboration this bulletin was conceived and thus it collects selected papers presented at the joint fib aci convention session on bond in concrete held in detroit usa in 2017 the bulletin is based on four main sections concerning general aspects of bond anchorages and laps of bars and prestressing tendons bond under severe conditions degradation of bond for corrosion bond

in new types of concrete the main aim of the bulletin is to shed some new lights on the advances in understanding and application of bond related issues achieved over the last few years and identify the challenges and priorities to be addressed in the next years another important aspect of the bulletin is to provide practical information from research findings

for courses in assessment in early childhood education assessing young children addresses theory and provides illustrations of appropriate practice for prospective teachers as well as discusses current trends for experienced teachers it approaches assessment as an integral part of the teaching learning process key components of the assessment system advocated include cultural sensitivity parent collaboration and a vision of inclusionary practice in all early childhood environments child care and school this book reflects the knowledge base of early childhood and early childhood special education

this edition includes a new emphasis on early intervention and family centred care as well as the changing roles of the occupational therapist in schools and hospitals also covered are issues such as ecological assessment new developments in assertive technology handwriting and sensory integration the text reflects the changes and progress made in the area of paediatrics with new chapters on mobility handwriting feeding posture neuromotor and visual perception
